# Fusion Voice Digital Dictation

**The quality of a patient's chart relies upon the clinician's ability to effectively communicate findings, plans and progress. A reliable, accessible and fluid dictation workflow is essential, and Fusion Voice provides this platform.**

**W**orld-class health systems and community health providers find Fusion Voice® can be tailored to meet their unique needs. The Fusion Voice Dictation System provides a scalable architecture to accommodate growth. An exclusive, fault-tolerant design provides high availability. System partitioning provides a single system image that can be shared by many facilities and departments without compromise.

Transition tools are built in to provide an avenue to reach beyond dictation to speech recognition when the technology is right for your physicians and your infrastructure is ready to support it.

## **Transparent Technology**

A series of built-in tools allows even extreme customization to integrate with your existing IT solutions. Instead of teaching your staff how to use the system, teach the system how the users work. Take advantage of keystroke and process savings through simple integrations: let the EMR or PACs workstation identify a study and save scanning a barcode, download the physician's schedule to their dictation device and save button presses, and let Fusion Voice update report statuses to departmental chart tracking systems to save manual data entry.

By providing advanced, intuitive features to assist busy users and accommodating a potentially remote, and possibly global workforce, you are ready to meet inevitable change with these advanced dictation solutions.

# Why choose Fusion?

## Adaptable

Fusion Voice builds on the traditional methods of digital dictation. Support includes telephones, dictate stations, and digital portables as well as dictation options for smart phones, PC-workstations and VoIP. Support one or all in the same installed solution.

## Reliable

To ensure business continuity in the event of computer or network failures, our exclusive Fault Tolerant Module (FTM) is essential to mission critical deployments. By distributing the processing and data storage across multiple servers, possibly even in different geographic locations, Fusion Voice provides single-view management with zero downtime expectation.

## Secure

An essential component in HIPAA/HITECH planning often has been the ability to manage the need to provide a highly accessible dictation reporting system while maintaining the safeguards required to protect health information.

Fusion Voice logs all events, tracks all access and can even alert you if a breach has potentially occurred. Encryption ensures delivery of dictation from end-to-end without worry.

## Flexible

Today's healthcare providers must have a revenue strategy. To meet the individual needs of healthcare providers, Fusion offers multiple financial options. Whether you want to buy and own your dictation solution or take advantage of our Software as a Service (SaaS) options called Fusion Live™ or Atom Live™, our cost-effective solutions and return on investment will satisfy the most discerning financial analyst in your organization.

# Fusion Text Transcription and Editing

**Highly productive, customizable and completely integrated; these are crucial components essential for every healthcare document management system.**

**D**olbey transcription software is recognized as the industry leader for features and customer satisfaction. Extend in-house functionality to remote workers with ease while maintaining control. Manage reports from dictation to signature and distribution to final document archival in this highly customizable and feature-rich system.

Key components of Fusion Text® enable

transcription/editing to work faster and easier with greater precision than ever before. Speed typing, customized formats, medical spell checking and stored routines are highlights of the tool kit and are easy to learn for all transcription staff. Integration with patient registration, demographics and order systems eliminates redundancy while ensuring the integrity of the data as it is passed from Fusion Text to your Health Information System or EMR.

## Productivity

Transcriptionists will experience a significant increase in daily line production by using the Fusion Text productivity tools. Personal and global report normals, medical and pharmaceutical dictionary and spell check, addendum tools, report search and keyboard shortcuts all combine to create an environment for speed and quality.

## Reporting

The Custom Management Report features rich data with customized views that focus on tracking productivity, employee time, work volume and trends. Use this tool to design your own report by selecting the columns, grouping levels, sorting, criteria, and various other options. Output detailed lists or create quick executive summaries including color charts and graphics.

## Integration

By integrating ADT and orders data into the Fusion system, transcription will gain productivity while assuring the consistent reliability of chart demographics. After documents are typed, Fusion can send entire reports, report elements or discreet data, to your Electronic Health Record, Health Information System or departmental system. Dolbey's experience has led to established integration with nearly every major software vendor in the healthcare industry.

## What is the Fusion Suite?

Dolbey's award-winning healthcare suite of solutions improve productivity while delivering better documentation which improves patient care. Since 1914, Dolbey has consistently evolved its products incorporating the latest technologies available to meet the demands of the healthcare community. Today, our suite of products includes Speech Recognition (premise or cloud-based), CAPD, CDI, CAC, Transcription and Dictation.

**You can experience more accurate documentation,  
healthier patients and better revenue cycle with Dolbey.**

# Speech Recognition

**Fusion Speech® | BES powered by Nuance's SpeechMagic™ proves every day that speech recognition is a productivity tool for transcription.**

**T**ranscription turns to editing when dictations are processed first through the speech recognition engine before reaching transcription. Transcriptionists' edits fine tune the speech recognition dictionary for continuously improved accuracy.

Flexible report distribution reduces manual effort and provides essential audit trails and logs of where and to whom patient information has been sent. Print real-time or to patient floors, fax to multiple destinations determined by recipient preferences and even email reports to ordering and attending physicians with secure encryption and password protection.

From home, office, hospital or off-site, your clinicians can securely and quickly access their reports through an Internet browser. Physicians can view, sign and edit reports to speed document turnaround and availability. With configurable rules, iDocview™ even meets the needs of academic facilities that require multiple signatures and more complex signing relationships.

Since 1914, Dolbey has been providing voice recording and document management solutions designed to help healthcare organizations improve workflow, boost productivity and increase profitability.

The Fusion Suite platform is Dolbey's line of award-winning software products that includes dictation, transcription, speech recognition, clinical documentation improvement and computer-assisted coding technologies. Together they deliver an end-to-end solution which creates more accurate reporting of critical data elements and improves documentation, reimbursement and patient care.
